

NAC platform — endpoint inventory

↓ export, reduced

reverse proxy: TLS, HTTP/2, rate limiting
scan 20 r/s, administration 5 r/s, body $\leq$ 32 MB

service tier: scan / job / administration endpoints
planner, job workers, quota, feed updater

↓ one batch request

decision engine (compiled) — concurrent workers
in-memory index, matching,
gates, intervals, ONNX tagging

↓ once at start-up

relational store: advisory corpus, caches, job queue

edge appliance — inventory does not leave the managed network
